User Guide: How to Interact with the Chatbot

AIVA (Artificial Intelligence Virtual Assistant) is an educational chatbot I created to help people learn about Artificial Intelligence (AI) in an interactive and beginner-friendly way.

1. Start the Conversation

- The first thing you will see when interacting with system is the welcoming text.

- Simply type your question or topic in the chat box.

- You can ask about definitions or explanations, but if your question is not related to AI you'll get an error message.

2. Using Suggestion Chips

- Below the chatbot's answers, you'll often see suggestion chip which is a clickable button with related topic.

- Click a chip to quickly explore related concepts without typing.

- Example: If you ask about AI, you will see chips like "Machine learning"

3. Visual Aids

- Sometimes the chatbot will show images or diagrams to help explain concepts.

- These visuals make it easier to understand complex ideas.

4. Taking Quizzes

- The chatbot may offer quizzes to test your knowledge on topics.

- You'll see multiple-choice questions with clickable options.

- Select the answer you think is correct by clicking the option.

- The chatbot will provide feedback that you are correct or not.

5. Tips for Better Interaction

- Be as specific as possible with your questions.

- Use simple language to avoid confusion.

- If the chatbot doesn't understand, try rephrasing your question.
